Common Systems Group (CSG) Meeting

February 24, 2004

2-4 p.m.

2325 Murphy

AGENDA

1) Data Warehouse Technical Review Process Final Steps (Jim Davis)

This is informational and no action is required. Objective is to set the stage for the March CSG meeting and final steps of the process. Additional comments on the functional requirements, technical architecture, or technical review should be sent to Jim. Jim will be packaging the proposals, review, and outstanding issues to take to the CITI for approval (pending campus impact study) at their March meeting.

2) Preliminary assessment of ITPB security policy resolutions (Kent Wada)

Objective is to organize for developing the operational details for the ITPB security policy resolutions:

- Each campus unit is responsible for its own impact institutionally, on the campus backbone network and beyond.
- There need to be consequences for non-compliance and an avenue for recourse when disputes arise.
- All devices connecting to the campus network must meet minimum security standards as must the network to which they attach.
- During a security event, CTS will first protect the campus backbone network and isolate the problem traffic, network or hosts.
- OIT, working in conjunction with CTS and local administrators will proactively work to minimize threats to the campus network.

Additional background material will be available at the meeting.
